Editor's Note: *EarthBeat Weekly* is your weekly newsletter about faith and climate change. Below is the Aug. 7 edition. To receive *EarthBeat Weekly* in your inbox, [sign up here](#).

I'd like to begin this week's overview by saying hello and thank you for being part of EarthBeat. I'm delighted and honored to be joining the EarthBeat team as editor. Special thanks go to [Bill Mitchell](#), who has guided EarthBeat since its launch last October, and to [Brian Roewe](#), whose deep understanding of the relationship between faith and environmental issues has been evident on NCR's pages for nearly a decade.

If you see a shift toward more coverage of Latin American climate and environmental justice issues in the months ahead, that's because I live in Lima, Peru, a city of about 10 million people on the Pacific coast of South America and the largest desert city in the world after Cairo, Egypt. I came to Peru in 1989 as a [Maryknoll lay missionary](#), with a three-year contract ... and, well, I forgot to go home. Or more precisely, I found a second home. After working with Maryknoll for 14 years, I freelanced as a journalist for 17 years, mainly covering the environment, public health, indigenous peoples and the Catholic Church.

One of the things I've learned in that time — from scientists, indigenous people, small farmers, missionaries and others — is the depth and strength of the physical, biological and spiritual interconnections that bind our planet together. At EarthBeat, we strive to shine a light on those interwoven threads, examine them in new ways, celebrate them, seek means of strengthening them and call out injustices that threaten them. Thanks for joining us in this endeavor.

My first week as editor of EarthBeat has been an eventful one, with [Hurricane Isaias](#) churning up the eastern seaboard, the ongoing coronavirus pandemic continuing to take its [greatest toll](#) in the Americas and the tragic [explosion](#) in the port of Beirut. As unrelated as they may seem, all three have links to climate change.

Water splashes on rocks in Maryland's Chesapeake Bay during Tropical Storm Isaias Aug. 4, 2020. (CNS photo/Bob Roller)

Some years back, when I was covering a landslide caused by a flash flood, which had destroyed homes and displaced residents of a small town in the Andes, I referred to it as a natural disaster. Someone who worked with the community corrected me: The rainfall was natural, he said, but the disaster was rooted in human decisions and could have been avoided if the community, which had suffered a landslide from flooding in the same ravine years before, had been rebuilt outside of the danger zone.

Every time I feel that term on the tip of my tongue, I pause to think: Is the disaster natural, or could people have averted or mitigated it? Hurricanes fall into that category. Along shorelines in the southeastern United States and elsewhere, housing and other structures have replaced wetlands and [mangrove swamps](#) that create a [natural buffer](#) against wind and waves, besides providing a home for birds and other wildlife and a breeding ground for fish and crabs. Mangroves are also important for

capturing carbon dioxide, which makes them an important buffer against global warming.

The pandemic is also a natural event with human causes. Pathogens (think malaria, Ebola and Zika, as well as SARS-CoV-2, the coronavirus currently upending our lives) are [more likely to jump](#) from wild animals to domesticated animals and humans when the forests where they live are disturbed, especially by clear cutting for ranching, or when the animals are trapped and shipped to live-animal markets to be sold for food or as pets.

The Beirut explosion also apparently had human roots — the storage of highly explosive ammonium nitrate, a fertilizer, in facilities dangerously close to a populated area. (It was also a reminder of [similar explosions](#) in Texas in 1947 and 2013.) But it also highlights the environmental hazards that plague seaports worldwide, endangering residents of nearby neighborhoods, who are disproportionately people of color. Air quality around seaports is notoriously bad because of [emissions from cargo ships](#).

Refineries and storage facilities for other hazardous materials are often built in and around seaports. That makes it convenient for shippers, but jeopardizes the health and safety of residents of nearby neighborhoods, who often don't know what's stored in those tanks and warehouses until disaster strikes. They may have long-term exposure to toxics in the air and water around those facilities, as well as to the risk of an accident involving trucks or trains ferrying those materials through their neighborhoods.

The people who suffer most from extreme weather events — which scientists say are likely to become [more intense and more frequent](#) with climate change — as well as from the pandemic and exposure to air pollution and other hazards around seaports are people of color, indigenous people, immigrants and families with low incomes.

Increasingly, residents are pushing for cleanup around ports. A neighborhood association in West Long Beach, California, is [fighting for tighter regulation](#) of emissions from ship smokestacks, which are expected to become the greatest source of smog in the region. Faith communities, environmental groups, labor organizations and others in New York and New Jersey have joined to form the [Coalition for Healthy Ports](#). The U.S. Environmental Protection Agency has recognized seaport-related pollution as an environmental justice issue and has

published an [environmental justice primer for ports](#). Because the ship emissions that endanger human health also contribute to global warming, addressing climate change will also be a step toward better health in vulnerable communities.

Here's what else is new on EarthBeat this week:

- To raise awareness about the toll the coronavirus pandemic is taking on Amazonian indigenous people, the region's bishops invite you to "[Amazonize yourself](#)," as Brian Roewe reports.
 - In Eos Magazine, as part of the Covering Climate Now media partnership, Rishika Pardikar reports that India is making way for huge solar panel arrays in the Thar Desert by [bulldozing patches of forest that local communities hold sacred](#).
 - By the time Hurricane Isaias reached the U.S. eastern seaboard, it was quickly downgraded to a tropical storm. But Catholic organizations were ready to assist with relief efforts after six people died and millions lost power. [Catholic News Service has the story](#).
-

Here's some of what's new in other climate news this week:

- At InsideClimateNews, James Bruggers takes a look at how Catholic scientists and others are [putting into practice *Laudato Si'*](#), Pope Francis' encyclical on care for our common home.
 - A group of scientists, including Brazilian meteorologist Carlos Nobre, who has advised Pope Francis on climate issues, has launched a sustainable development plan called "[The Amazon we Want](#)."
 - By reducing air pollution, the Regional Greenhouse Gas Initiative in the northeastern United States [improved children's health](#), resulting in a savings of more than \$191 million, a study found.
-

Upcoming events:

Events this weekend honor the lives lost in Japan in the bombing of Hiroshima and Nagasaki 75 years ago, and explore the environmental legacy and persisting nuclear

threat.

- You can [add to the Peace Ribbon](#) with Pax Christi USA from 12 p.m. to 1 p.m., eastern time, on Aug. 8. Bring a yard-long fabric banner illustrated with the answer to the question: What can I not bear to think of as lost forever in nuclear war or any war or environmental disaster? To join: <https://us02web.zoom.us/j/81894855654> (Meeting ID 818 9485 5654).
- You can also display your segment of the peace ribbon at the [online remembrance event](#) held by [PeaceWorks-Kansas City](#) Aug. 9 at 7 p.m., central time. Join at: <https://us02web.zoom.us/j/81634253455> (meeting ID 81634253455).

In addition, the [American Climate Leadership Summit](#) offers sessions every Thursday afternoon in August, covering issues such as faith and resilience, health, oceans, the politics of climate change and more.

Closing beat:

Aug. 9 is International Day of the World's Indigenous Peoples. If you'd like to respond to Amazonian bishops' call to "Amazonize yourself," you can tour a [virtual exhibit](#) about Brazil's Kayapó people, who were displaced by the giant Belo Monte Dam; learn about other threats to Amazonian indigenous people in a [report and webinar](#) on "Averting Ethnocide"; and reread Kichwa leader Patricia Gualinga's reflection about the [hope she finds](#) in *Laudato Si'*.

As always, if you find EarthBeat reporting worthwhile, [we urge you to consider supporting NCR with a membership for as little as \\$5 per month](#). If you're reading this issue of EarthBeat Weekly in your browser, [you can sign up for regular, weekly delivery to your inbox here](#).
